# Shameem A R

shami96.official@gmail.com · +91 8129668302 · Kerala, India · www.mobihack.me

A software developer with nearly 4 years of industrial experience in product development in the areas of frontend development, backend development, and UI design using multiple programming frameworks.

## PROFESSIONAL EXPERIENCE 3

**Bhumio, Inc** · Startup                                                                                       **Aug. 2022 – Present**
Product Lead                                                                                                    New York, USA · Remote
- Bhumio is a product-based startup focused on streamlining the real estate transaction process for both agents and their clients. By providing a unified platform for creating and e-signing legal contracts. Bhumio also provides analytics and white labeled products for enterprise customers.
- I began my journey at Bhumio as a Frotend Lead. I rose through the ranks and was made the product lead for the product. As product lead, my major responsibilities in my day to day work includes:
  - Headed the whole engg. team to execute biweekly deployments and keep track of the project. Linear for issue tracking and feature roadmaps (Formerly Jira & Trello); Balsamiq for quick wireframing; Sentry for error monitoring
  - Meet with CEO and primary users (real estate agents) to manage expectations, strategize tasks and confirm viability for different features.
  - Collaborate with the different team members and analytics team to help them with complexities and keep track of their tasks.
  - Conduct interviews for both engineering and analytics teams.
- My major accomplishment & decisions made at the company include:
  - Moving legacy CRA react app spread across two repositories to a single monorepo through Vite and TurboRepo. PWA, Lazy Loading, and a shared package inside the monorepo were also introduced.
  - Made the decision to move from microservices architecture to monolith architecture in the backend. Moved databases outside docker to AWS RDS for easier management & scaling.
  - Made a cron based lambda function that syncs data from an MLS API service to postgres database that is consumed by both the product and the analytics team. Added a notification to Google Chat to notify about sync failure.

**Glass Cryptolabs** · Startup                                                                                  **Sep 2021 - Aug 2022**
Full Stack Engineer (Focus on Front-end)                                                                        Kochi, India · Remote
- Glass helps brands with post-sales conversational engagement, retention marketing, and validated end-user data analytics.
- React using NextJS · Python using FastAPI Framework · MongoDB · Postgres · Docker · AWS · CI/CD Pipelines · React Admin

**Pocket Store** · Contracted Project                                                                           **Dec 2020 - Aug 2021**
Full Stack Engineer                                                                                             Palghat, India · Remote
- Hyperlocal multi vendor ecommerce application with focus on grocery delivery and easy order delegation.
- React Native App Development · Vue.JS using Nuxt.JS Framework · MongoDB · Docker · Node.JS · JWT Authentication · UI/UX
  Case Study: Pocket Store Delivery System | Portfolio

## EDUCATION 1

**Dhanalakshmi Srinivasan College of Engineering**                                                              **2017 - 2021**
B.E. Computer Science & Engineering                                                                             Coimbatore, India
- Completed & Passed without any active backlogs. Under Anna University, Chennai, India.
- Member, Computer Society of India - Coimbatore Chapter.
